

4.4 TESTIMONIALS

Our children are really benefited by Mindspark where they get different types of question that enhance their thinking ability and their understanding skills. Questions are very interesting and application based. Overall their performance in Math have improved a lot. Thank you so much.

- Mrs. Jhumur Gupta
Mindspark Co-ordinator, Sarala
Birla Gyan Jyoti, Guwahati

We believe that every child is unique in his/her learning, and hence learning should be individualized. In general Mathematics is taught as a PROCEDURE. It is neither taught as a concept nor taught for understanding. In this context Mindspark assumes the role of a self-directed tutor. Children love this program and get individualized support and review. Can Maths be fun? Yes, when it makes the children think and help them work on their grey areas. MINDSPARK does it.

- Mr. M. Srinivasan,
CHAIRMAN, GEAR Innovative International School,
Bangalore

It was a program that required a little convincing but a lot of deliberation. The questions that plagued our mind were – will class III & IV be able to work on tablets? Will children be able to work out math that is not done step-wise, and isn't that the way math is supposed to be done? How will the logistics work and so on and so forth.... And then we thought we should try it before we make a decision.

- Four weeks later, the feedback from the students convinced us:
- Now I am also becoming clever in Maths.
- My silly mistakes are becoming better.
- I want Mindspark in my new class because our brains will run faster than others.
- There is an end session in Mindspark so that we can see what things we need to improve.
- My parents are happy and let me use the computer to do Maths.
- Clearing my doubts and revising. WOW!

There was little doubt left that and the children had decided. Mindspark had won hands down.

- Mrs. Suman Kumar,
Principal, Bluebells School International, New Delhi

Mindspark is indeed thought provoking and a catalyst for students learning curve. It has given a shift to the students paradigm from looking Mathematics as a burdensome subject to an enjoyable subject.

At the tip of our greatest awareness we as facilitators don't feel like simply coordinators but as growth agents.

Thanks for giving our students and us this experience.

**Mr. Aziz Kapasi, Mindspark Coordinator,
M V Dhulashia and JHC Trust Schools,
Rajkot**

I wanted to share with you our experience with MINDSPARK. I think it really has created a spark in my son's life.

Mind spark is a medium which has not only helped him to focus, but has also helped him to learn time management, interest for Math and IT HAS HELPED HIM TO COMPETE WITH HIMSELF.

At first he was just Ok.....but day by day he is doing it better and better. That excitement of achieving more Sparkies is what keeps him going and he has learnt to rectify his mistakes, as the corrections are right there.

I really want to thank the school for providing our children with good education.

Mindspark Parent

Mindspark has helped a lot to teachers in remedial sessions. As soon as the test is done immediately they are coming up with the misconceptions, jot it down during the department meetings, class-wise misconceptions are listed down, and they come out on how to take remedial sessions.

**- Ms. Vidhya Sriraman
Vice Principal, Innisfree
House School, Bangalore**

I've seen several online Math learning resources for children but Mindspark clearly stand out. The questions are designed to test the concepts thoroughly and are presented in a manner children like. Each question is followed by detailed explanation which helps. Challenge questions, timed tests, activities, wild card questions...all keep the child engaged in productive ways and the "Sparkies" motivate them to do it right! The ability of Mindspark to adapt to pace of the child really makes it the right tool for every child. The overall interface, animations, fonts, color schemes (except a couple of them)...all of these are quite good and child-friendly. I can keep going on and on.... :-)

Really wish all parents ensure their children spend the recommended 30 minutes daily on Mindspark.
